## Investment strategy

The Trust predominantly invests in high quality short-term money market and bank-based securities to achieve a very stable income stream and attempts to forecast the short-term direction of the interest rate cycle.

## Quarter highlights

- The trust outperformed its benchmark (Bank Bill Index) for the quarter. Money market yields are continuing to remain at suppressed levels as the RBA and the Federal Government are doing all they can to stimulate the economy.
- However, towards the end of September we started to see short-end rates slightly increase as issuers returned to the market for short-term funding.
- Allocations to term deposits, NCDs and cash notice accounts have added value to the CMT.
- No negative detractors.
